

ASTON MARTIN OF NEW ENGLAND

VANQUISH S

Aston Martin recently introduced the V12 Vanquish S, the fastest Aston Martin production model to date, this past September 23rd at the Paris Motor Show.

The Vanquish S is an evolutionary refinement of the current car, featuring a newly revised 520bhp V12 (up from 460bhp).

The new car features all of the Sports Dynamics suspension components as standard. With 20% quicker steering, stiffer dampers and springs, and shorter steering arms, the new S is more nimble, sporting, and communicative than the standard V12 Vanquish.

The S front brakes feature a six-pot caliper, a 378mm disc, and a 21% larger pad area. These changes, along with a revised pedal assembly, contribute to better pedal modulation while resisting brake fade and heat.

Shorter gearing (4.3:1 from 3.69:1) helps the S shave 2 seconds from the Vanquish 50-70 mph top gear acceleration time. Even with shorter gearing, the S can reach speeds over 200mph, and the 0-100mph sprint takes just 9.8 seconds.

Changes in styling are subtle. A new front splitter and rear deck revision are the major changes, along with a new wheel style.

Most of our S allocation is already spoken for, but please let us know if you're interested in discussing a future build slot.
